AI as a Classmate of Your Students

Abstract:

Recently, many studies have indicated that artificial intelligence (AI) can be just as effective as a human physician in diagnosing a disease. Indeed, with proliferation of AI in the society, our life will never be the same. Thus, the way we educate our students should accordingly evolve. The question is: How? In particular, should we just treat an AI system as yet another piece of medical equipment? In this talk, the speaker first shares some general opinions about the efficacy of AI and its impact on students' learning. He will then discuss some possible conceptualizations of AI in our classroom, hopefully helping graduates to be better equipped to work alongside AI in the workplace.
